COVID-19 Health and Safety Protocol

To ensure the health and safety our clients' and staff, we are implementing the following:

1. Our health care team will follow strict hygienic practices before, during and after treatments as adhering to personal protective equipment (PPE) and physical distancing protocols and will wear face masks.
2. We recommend that all clients and patients wear their own face mask. If they don't have one, one will be provided for them at the clinic.
3. We require that all clients and patients wash their hands upon entry and exit from the clinic. We have installed a hand sanitizing station immediately upon entry and also ask that you wash your hands thoroughly in our restroom.
4. We have modified our office set up to maximize physical distancing between patients at all times.
5. We will be asking all clients and patients to complete an on-line screening survey for COVID-19 symptoms prior to arriving for their appointment and we will be taking a temperature reading of all patients upon arrival.
6. Any patients experiencing flu like symptoms will be asked to re-schedule their appointment until symptoms have resolved.
